

Evans Vanodine
GLOBAL HYGIENE SOLUTIONS

CHSA MEMBER PROFILE

Introducing Evans Vanodine

Evans Vanodine has been developing and manufacturing consistent, efficient and cost-effective cleaning and hygiene products for 100 years. During that time, the company's products have not only been used by the British Team at the 1968 Mexico Olympic Games, but also used to protect the public, when moon dust went on show in Manchester, brought back from the 1969 moon landing.

Established in 1919 by William Charles Evans, the family-owned business began by producing spraying essences for cinemas, before branching out into manufacturing disinfectants, liquid soaps and various types of powders.

Today, our products cover an extensive range of applications for the industrial, janitorial, food process and animal health sectors. We help kill pathogenic diseases in hospitals and keep farms where our food comes from and the restaurants that serve it, safe and hygienic. We also help to make sure schools are germ-free and that kids know the importance of hand-washing, thanks to the Evans bug-busting team Edward and Emily and their classroom support tools.

The company currently exports to over 70 countries worldwide, with a further 10 countries serviced by licensed manufacturing units overseas.

Integral to the company has always been chemical research and development, Evans founder William and his son Derek, the current chairman, both being chemists. Their vision was for Evans to develop its own products, rather than rely on others to determine the quality of goods. This is a value the company still holds true today, with all the in-house laboratories having been rebuilt and expanded, as part of a new build extension to mark our centenary year.

Evans has achieved accreditation by the British Standards Institution under ISO 9001 and ISO 14001, ensuring quality and consistency at every stage of production. The UKAS accredited Microbiology laboratory is approved to test disinfectants against European Standard test methods, guaranteeing products are fit for purpose and bactericidal claims are substantiated.

Award winning

Evans Vanodine is the proud recipient of a Queen's Award for Enterprise, in the category of International Trade and an Export Champion for the North West. We have also won several BIBAs (Be Inspired Business Award, covering Lancashire) for manufacturing and export categories. These awards are a testament to the efforts of the entire company to be the best in our field and confirmation that we are successful in our efforts to operate on a global scale.

People make the difference

Evans Vanodine is a 100%, family-owned business, with the fifth generation of the family now working for the company. However, one thing that has remained constant throughout the history of Evans, is the commitment and dedication of the Evans staff. The staff are the real driving force in the company, so managers and staff are given the tools to drive their departments forward, taking ownership of their work and using their own initiative to do what is right for the company. As of 2019, there is no less than 40 staff who have reached 25 years' service and a further 7 staff reaching 50 years.

Technical expertise at your finger tips

The experience of our in-house microbiologists and chemists is always at the disposal of customers. Our technical team is always on hand to assist, offering advice and solutions. We also provide a wide variety of charts, cleaning guides, brochures and training films, free of charge to customers, both online and as hard copy.

Evans Vanodine
GLOBAL HYGIENE SOLUTIONS

A responsible business

As a manufacturer of industrial cleaning and hygiene chemical products, we understand there is a need to maintain as low an environmental impact as possible. We are committed to developing products that have the least impact on the environment without compromising on performance. The use of super concentrate products, such as our e:dose range, is increasing, as they use less plastic, less packaging and need less energy to transport, compared with traditional ready to use products. Using these super concentrates in conjunction with controlled auto dosing systems also guarantees an accurate dilution every time, eliminating chemical waste, as well as ensuring the task of making up a cleaning solution is quick, easy and safe for the user.

Looking ahead

The company plans to maintain its reputation as a trusted, market leading and sustainable business for another 100 years. Following a major refurbishment of our on-site laboratories, we are improving and investing in our manufacturing premises and filling and production line technology. These improvements will ensure we continue to innovate and develop products which are backed by science, as well as being able to fulfil our ever-increasing UK and international orders.

Accreditation

BSI Quality Management System: ISO 9001
BSI Environmental Management System: 14001
UKAS Accreditation Certificate for our Microbiology Laboratory (the longest-standing accreditation for disinfectant testing in the UK, outside of government institutions)
